Abstract

In colonial rule many countless sacrifices were made by the brave sons and the daughters of India who participated in the movement to free our motherland. After post-colonial many Indian writers rededicated to eradicating poverty, illiteracy, inequality, corruption, social evil like casteism, communalism, gender discrimination, woman empowerment, Rehabilitation, Landless labourers, Tribal farmers, superstitions etc.

Key words: nationalism, identity, social, poverty, rehabilitation

Industrialization

Government has created the positive environment in and at international level, Relaxing and bringing positive changes in the tax system. But still taking baby steps in this direction. Sudden change in industrial policy is not possible in our country. Government has to take into confidence all the stakeholders, common voters, opposition parties, labor's unions, financial institution. Judiciary, media both print and electronic, all the sections relating to the industrialization.

At present setting up industry is not easy. One has to take several permissions, collections so many documents. The process is time consuming, while taking permission we have to pay bribes to government employees, have to manage politicians, central board government, local bodies, water connection, road connection, electricity, fire brigade, communication, anti-social elements, political goons, harsh the owners and officials of industry. People blackmail the industrialists. Actually industrialization means job creation. But the gullible people do not understand this point.

Union leaders instigate the workers to agitate for higher wages, participating in decision

making. Country witnessed what happened in Mumbai in cotton Mills and Jute Industry in West Bengal. Several Industries old closed down due to labor unrest. It becomes very difficult for the some and medium scale industries to survive in unfriendly atmosphere. Planned and balanced industrialization of the country is must. At present some parts of the country are more industrialized, so the people of minimized parts of the country migrate for the job. It creates family and social stress. Slums are mushrooming, equal distribution of civic amenities become difficult, unhygienic conditions are created. During rainy season what happens in Mumbai, we witness.

Industrialists are very smart in taking undue advantage of the system in India. Violence of rules and norms, not paying bank loans, evading taxes, not paying wages, labour insurance premiums, illogical lockout corruption, cheating, these are some issues that Government has to look into. Because of our national 'Sanskar', unfriendly towards wellbeing of the Nation, sometimes system also compel the individual to commit crime to service in the cut throat competition. Nation has to inculcate the positive discipline, welfare, friendly sanskars, among the people. It is the job of Government creating

conclusive atmosphere is the job political leaders. It makes nation strong, economical viable, encourage the people, to become responsible citizens. Paying taxes on time means are making available fund for the future development. All round development, Industrialization makes nation broad minded, outlook is changed, export increase in manifold, self-sufficient is created, it has done sincerely. Industrialization does not mean slum creation. We have to give up bad habits.

Unorganized Labors

Industrial activities, agriculture work, transportation, hotels and domestic are heavily depended on laborers. There are two parts of labor's organized and unorganized. Organized labors have unions. Unorganized labors have no union means they are not united. While color labor and blue color labor, people working in offices like banks, educational institute, hospitals, specially table work are white color. Marginally working on agriculture, mines are blue color labors. Workers those who have unions have greater power of bargain they are well paid, they have job absurdity, pation facility, travel allowances, health facilities, particular working hoots entitle to earned leave, paid leave, easy loan facility accommodations are provided for certain departments, companies they have enough resources to look after their family, in short they enjoy dignity, human value in their life. Because there is no worry of losing the job. They get certain amount of payment permanent. They have pay scale, pay commission, Government employees are more fortunate than employees working in private organization. People working with the renewed and well-known private companies and are permanent employees are more succeed than the employees working on contract basis.

Those who are working on daily wages on contract, brought by the third party are minus perks, certain working hours, easy loan facilities attractive salary, job absurdity, job satisfaction, those who are working in unorganized sector have to suffer in life. If the person is illiterate, the chaos of misery is high. We have laws to protect the worker's interest, but laws are misused, abused, or not implemented sincerely. In our country percentage of employment

is very high so the large part of the population is working in unorganized sector. The solution to this challenge is development at agriculture because percentage of employment is very high in agriculture sector so the all-round development of agriculture is necessary. Agriculture has the capacity to provide enough work to the people. Second thing the development of Industries and service sector, development in this sector create job and other earning opportunities. Improving the quality of primary education, applying small family norms increasing the numbers of schools. Importing technical skills. Awareness social security schemes for poor people. Domestic works are mostly neglects section of the society because country has poor mentality customs and traditions are also playing their part in injustices meting out to the weaker section of society specially economically socially, and educationally. conditional the people who have to work, with small hotels, eateries roadside dabas, rag pickers is very pitiable. Manual physical work is reserved for the people belonging to the SC, ST and OBC's. We do not have to blame the upper casts, rich people, people those have resources, for the misery of poor people. But when we think about a developed country - civilized, country, educated, demo crating, injustice free, a powerful, country of opportunity country with a human values, when we have to think about welfare of all section of society and to make the country strong, make SC, ST, OBC's strong, educationally, economically, socially, then we can create a strong nation, a nation with illiteracy of open defecation, social ills, beggars, rag pickers, manual scavengers, slums, illness, dark, droughts. Balanced development of all sections is need at the hour.

Rehabilitation

Country has reach mineral resources, these resources are mainly in forest areas which are dominated by treble population habituating. Trebles are economically poor they have no knowledge of richness of their areas. They are living there for a long time. While exploiting the mineral resources, trebles are displaced, they have to move to other places sometime unfriendly areas. So their routine life is disturbed, trebles are mostly depend on forests for their livelihood. They are not in

position to build their shelters, whenever the new developmental project is lawful. Gov. or private it needs a large portion of land. While acquiring land trebles or the people who are living in the area for generations are threatened, they have to vacate the area and have to move to the land allotted by the Government, shifting from one place to another place is very tiresome and troublesome. People have to change the neighbors, their routine habits and livelihood, projects as mines or steel plants or projects based on minerals or forests need, water, land, electricity, new township roads and many more thing, to fulfill all these requirements people living the area are stressed. Some community or political leaders take undue advantage of the situation and instigate the people to agitate against the project. They blame the governments, state or central a claimed that this project is least beneficial to you. As far as employment is concerns the people of the area are not benefited as they are not educating, qualified. The only employment they get as unskilled workers, watchmen or drivers.

Resentment among the people grow and they start to hate the government. Sometimes antinational and antisocial elements exploited the condition and these goes against the instruction development, national development. Peace is disturbed, education of children of the area is affected. So before starting a new project government or concerned agencies should first build houses, schools, community center, drinking waters facilities, hospitals, and other required amenities, then ask the villagers to vacate their houses. People should be convenes the government is for there all round development. Private companies should force to help the people of the area We cannot imagine a country without people. People or population is the essential part of a nation. Population fulfills the criteria of a nation. country like India is the most populous. Villages, hamlets, towns, cities, people living in isolated places, in deserts, in forests make the nation strong, safeguard the borders, provides manpower, employees, students, community leaders, social reforms, national leaders, political leaders are types of required people. So the wellbeing of countrymen is the duty of the ruling class of nation, Governments

are formed with the help of people. Sometimes by democratic ways or other ways of politics. All round development, welfare is the motto of present democratic countries. In democratic countries common man's views are important while framing locate, regional, and national policies, agriculture, industrial, housing, irrigation, nuclear, defense, prices educational, child our women policies are framed by the lawmakers. People's opinion is a vital part of democracy.

Downtrodden, disadvantaged, economically weaker section, religious, group should not feel neglected. Their participation in the democratic process is necessary for the healthy all-round growth in all sections. Marginal farmers and tribal are the most insecure section of the society the always feel threatened as they mostly depend on nature for their livelihood. Their interest is the interest of society and nation. If they feel insecure it means nation feel insecure. There resentment is not good omen, because antisocial elements are ready to harm the interest of the nation. Bringing the tribal and weaker sections of society in the mainstream of development leads to strong binding of the nation, leads to a strong democracy, creation example.

People living in rural areas or small towns have little income sources. No land, no business, no round the you work, no alternative sources of income, large families, unemployment, ill health, literacy and many more things force them to migrate to the big cities. Slums provide them shelter and commercial aquavits, industries, rich people, construction sides provide them work. Cities produce dirt, garbage, waste of all types. Industrial domestic, market places, vegetable markets, these are the place was dirt is produced in large quantity. People those who have not stable employment turn towards these dumping grounds for the little money, feeding these families. Dropout children, children ran out from home, without parents, children belonging to weaker sections of society, fallen in bad habits, drunkards are attracted towards the waste to make money. Slums are the social problem in India. We cannot say that we are developed without the development of slums. It does not mean bringing only housing facilities to them. Social, economics,

educational, political, awareness, important of small families, keeping away from bad habits, welfare of children, higher, providing employment these are the burning issues of the slums. Rag pickers keep places and clean, it does not mean we have to encourage more rag pickers, scientific waste management, segregation of waste without proper care is injurious to rag pickers as they do not use any protective gloves while sorting out the waste.. Protection of rag pickers are the most significant step because they are protecting the gear cleaning the environment.

Social Security Scheme

Due to the dearth of social security schemes in our country, poor people's life become very miserable. He faces economic, social, educational, political, social, educational, political and health problems. Lifesaving drugs are very costly. There are no Government, hospitals in good running condition. In our country we have large number of patients suffering from various diseases and this is good opportunity to train the doctors, but due lack of health infrastructure like hospitals and medical schools, we are not exploiting the situation. Relatives of poor patients have to sell their live-stock or ornaments to provide medicines to the patient. When farmers suffer from natural or man-made calamities, situation becomes very critical. It goes out of control. If there are some social security schemes, getting advantage of it becomes very difficult because of red traipse, corruption and illiteracy and various other problems. That time person thinks about committing suicide. Paying urgent attention towards social security schemes is in the national interest.

Superstitions

We are heavily dependent of Gods and Goddesses. We have cores of Gods and Goddesses. Gods and Goddesses are specialist every field there special God and Goddesses. We have rain God, health God, education God and Goddesses, protection God. We have a God to find out the hidden treasure. Future of Women when there is no rain, use pray to God, when there is heavy rain again, we pray to God. When the minimum rain again we take the help of God. Then we have several fares,

mellas, take out a dindies, upto the Pandharpur, Shirdi on foot. We have local God and Goddesses to protect our village on the boundry of the village (habitating area). Snake Gods, Varaha Gods, Bullock, trees, even frogs are worshiped to holy cows, buffaloes, camels, elephants and stone, rocks, are also Gods. Worshipping all there God and Goddesses consume so much time and wealth and what use get in return nothing only mental satisfaction and free hours of amusement, once there were no means of entertainment so it was okay, but none it is the time of get rid of worship because Gods are not helping us. So we have to think you practically, welfare of farmers is not the job of Gods or Goddess. It is the job of human being. Hence, I am not cursing the farmer community, but it is as reality. Due to worship we do not get a clear direction worshipping Goddess, believing in falsehood, development of the agriculture is not the work of Gods and Goddesses.

It is the job the Agriculture universes. Meteorological science, Government policies, dedication of the farmers, new thinking, observations studding the agriculture sector of developed countries.
